

## Automated Provisioning.

# Your Key To Maximizing Service Agility & Operational Efficiency

When it comes to Provisioning, today's provider needs to deliver innovative services that are faster and more flexible, at the lowest possible cost—all while responding to the surrounding dynamics in real time.

As part of IDI's robust CostGuard B/OSS suite, our Provisioning engine empowers communications service providers to completely automate the configuration of network services and business systems thorough the entire lifecycle—eliminating manual errors, maximizing efficiency, and shortening service activation times.

## An End-To-End Solution—From Order Entry Through Revenue Recognition

IDI's CostGuard Provisioning is a best-in-class, comprehensive integration designed to reduce network complexity and increase profitability. You'll enjoy:

- ▶ **Complete Automation** – integrate to any platform for automated delivery of any type of communications, cloud, or digital service
- ▶ **Control And Flexibility** – over order provisioning and timing with IDI's advanced Workflow capabilities
- ▶ **Faster Speed-To-Market** – through our library of pre-existing interfaces

## Designed to Scale As Your Business Grows

IDI's proprietary Cloud Engine technology is expressly built to support processing for service providers. Our on-demand scaling of processing nodes provides a consistent performance experience even as your order volumes spike and grow.

## Delivering Superior Visibility & Increased Agility

Rounding out the wealth of benefits that IDI's Provisioning module delivers, you'll experience:

- ▶ **Full Transparency** – into every provisioning request, platform call, and response. Easily identify bottlenecks and rapidly troubleshoot to resolve issue quickly, ensuring the fastest service activations
- ▶ **Easy Product Catalog Mapping** – to order activities, while adding specific business logic to determine how every item is provisioned
- ▶ **Inherent Flexibility** – enables you to incorporate business changes at a rapid pace and eliminate any dependencies on making your services market ready

## Fully Integrated With Metaswitch

IDI's Metaswitch interface enables providers to fully automate account and service configuration in their switch. You'll have the ability to add, update, and delete:

- ▶ Business Groups
- ▶ Business Group Lines
- ▶ Number Blocks
- ▶ Managed Devices
- ▶ Individual Lines
- ▶ SIP Trunks
- ▶ Hosted PBX
- ▶ On-premise PBX (coming soon)
